

Group Assessment Assignment

Class Project – Full Scope

FIRST DRAFT

July 17th, 2019

Goals

- Create teams of 4 people.
- Assess as a team the entire project
- Determine the evolutionary path in the development process of the project
- Stay within the confine of the team, no cross-pollination of any kind between teams.

Outcome

- The overall development strategy in phases
- A document clearly outlining the most important aspect of development to ensure the project's success
- A presentation by one member of each team to the rest of the class

Rationale

As a team, you will analyze the requirements provided to you in a separate document.

Determine the priority of the features that need to be implemented.

This means that some features are 'core' and others build on that 'core'.

Without the core features, you simply wouldn't have the application in any reasonable form that could fulfill its requirements.

Your documentation clearly outline what you have discovered to be core vs the rest.

Your main goals are to clearly determine how you would come about to develop the core aspect of the project as a form of a proof of concept that would mutate into code that can be used as a stepping stone for improvement.
